

Braking systems development

Applus IDIADA's Braking Systems department offers **complete solutions for brake development projects worldwide**. Having more than 20 years' experience in braking systems engineering and testing, Applus IDIADA's Braking Systems department is made up of an international team spread around its worldwide facilities (Santa Oliva, Mojacar, Germany, United Kingdom, Italy, India, China and Brazil). Its main asset is the successful integration of design, simulation and testing capabilities, enabling maximum efficiency in cost and time.

IDIADA's Braking Systems department can offer services throughout the complete vehicle development process, from initial concept phase and during the whole design flow, during component testing using brake dynamometers and in vehicle testing as well (both on proving ground and open roads). State-of-the-art instrumentation is available and innovative measuring techniques have been developed by IDIADA's Braking Systems team.
