

Live streaming services

Real-time streaming sessions to follow up your testing projects.

Due to the current COVID-19 situation that make it difficult for you and your team to reach our facilities, we offer you our Live streaming services. A **cost and time-effective solution** that allow you to be virtually present at IDIADA's lab to follow up the milestones of your testing projects.

Our real-time streaming sessions provide an **optimal virtual experience** and allow multiple attendants to simultaneously **witness and validate testing set-up and instrumentation** and to **interact with our engineers and technicians**. You are in control of the whole testing process ensuring all procedures are accomplished as requested.

As always, we are fully committed to our clients' **confidentiality** requirements and all online communications concerning your ongoing projects will be provided through secured means.

Our proposal is based on the following **facts**:

- IDIADA Proving Ground is **fully operational**.
- There are **no restrictions on the shipment of vehicles** or samples and IDIADA's logistics department is at your disposal.
- IDIADA's technicians, engineers and test drivers from our various engineering departments **can thoroughly perform your testing** programmes on your behalf.

The key factor of this new service is that you are in control of the whole testing process. You will be able to provide your inputs at all testing stages, including the supervision of the instrumentation set-up before the testing.

To make this possible, IDIADA has put in place communication and secure data-transfer tools to keep a constant communication flow between you and your IDIADA team.
